

# Telephone Directory CRUD Operation

Telephone directory: Perform CRUD operation using mongodb and python.

You need to

Import necessary modules.

Perform CRUD operations to manipulate data in MongoDB. Create, retrieve, update, and delete (CRUD)

Create a database using attribute style on a MongoClient instance. Declare a variable `db` and assign the new database as an attribute of the client.

Create a collection.

For CRUD operation, create a directory which has fields like Name, Phone number, Place etc.,

Insert the record into the collection.

Make a query to find records you just created.

Modify the records, use the `update_one()` method. The `update_one()` method requires two arguments, `query` and `update`.

Delete the record, use `delete_one()` method. `delete_one()` requires a query parameter which specifies the document to delete.
